APPENDIX 2

DATA SHEETS

LOCATION:_____ Tech lab initials:_____DATE:_____
Number of acres in property:_____ Field tech initial:_____DATE:_____

Roads and trails within hexagon:

Category	Width of road	Length of road	Area of road (lxw)

Categories: 4 lane highway, 2 lane highway, paved road, unpaved road, OHV (off-highway vehicle, i.e. all terrain vehicles) trail, and hiking trail.

Habitat types within hexagon:

Habitat	Percent of hexagon area in habitat
1^{o} habitat:_____	

Roads and trails within 101 ha block:

Category	Width of road	Length of road	Area of road (lxw)

Categories: 4 lane highway, 2 lane highway, paved road, unpaved road, OHV (off-highway vehicle, i.e. all terrain vehicles) trail, and hiking trail.

Habitat types within 101 ha block (approximate 101 ha):

Habitat	Percent of hexagon area in habitat
1^{o} habitat:_____	

Other notes (i.e. – block smaller than 101 ha due to property boundary, etc, etc)

Ground truthing of data obtained from GIS for LOTIC (running water) HABITATS:
This should be filled out in the lab, prior to habitat characterization field work. Field work should include recording information concerning discrepancies between the database and what is actually there. For field work, the technician should have a map of the site.
LOCATION:_____
UTM coordinates from lab: E_____ N_____
GIS OBS:_____ DATABASE USED:_____
Date of lab work:_____Date of field work:_____Field OBS:_____
Estimated spacing needed for 11 transects (at 3X width of stream):_____

Roads and trails within 30 m of each side of channel:

Category	Distance from shore	Area of road (l*w)	Width where crosses channel

Categories: 4 lane highway, 2 lane highway, paved road, unpaved road, OHV (off-highway vehicle, i.e. all terrain vehicles) trail, and hiking trail.

Additional compacted soil areas within 10 m of channel:

Description	Distance from shore	Area of compaction

Roads and trails within 30 to 100 m of each side of channel:

Category	Distance from shore	Area of road (l*w)	Width where crosses channel

Categories: 4 lane highway, 2 lane highway, paved road, unpaved road, OHV (off-highway vehicle, i.e. all terrain vehicles) trail, and hiking trail.

Remember to print a map with the wetlands numbered within each hexagon for ease of field identification, and to include these numbers, if possible to tell from previous GIS coverage, on the POOLS data table.
Additional information, things that may need checking in the field or things that may be needed in the field:

- Is this intermittent/ephemeral or does it have water?_____
- Does this need to be electroshocked and/or checked for mussels?_____

Ground truthing of data obtained from GIS for LENTIC (standing water) HABITATS:
This should be filled out in the lab, prior to habitat characterization field work. Field work should include recording information concerning discrepancies between the database and what is actually there. For field work, the technician should have a map of the site.
LOCATION:_____ POOL ID:_____
GIS OBS:_____ DATABASE USED:_____
Date of lab work:_____Date of field work:_____Field OBS:_____
UTM coordinates (from lab): E_____ N_____
Estimated perimeter/circumference: _____
Estimated spacing needed for 30 plots around perimeter:_____

Roads and trails within 30 m of shoreline:

Category	Distance from shore	Area of road (l*w)

Categories: 4 lane highway, 2 lane highway, paved road, unpaved road, OHV (off-highway vehicle, i.e. all terrain vehicles) trail, and hiking trail.

Additional compacted soil areas within 10 m of shoreline:

Description	Distance from shore	Area of compaction

Roads and trails between 30-100 m of shoreline:

Category	Distance from shore	Area of road (l*w)

Categories: 4 lane highway, 2 lane highway, paved road, unpaved road, OHV (off-highway vehicle, i.e. all terrain vehicles) trail, and hiking trail.

Additional information, things that may need checking in the field or things that may be needed in the field:

Sky Codes	
0-	Clear or few clouds
1-	Partly cloudy or variable
2-	cloudy or overcast
3-	Fog
4-	Drizzle
5-	Rain shower

Wind Codes	
0-	0 mph, no movement
1-	1-3 mph, Calm. Smoke drifts
2-	4-7 mph, Light. Fell on face, leaves rustle, wind vanes move.
3-	8-12mph, Gentle. Leaves/twigs in constant motion, flag extends.
4-	13-18mph, Moderate. Dust and paper raised. Branches in motion.
5-	19-24mph, Fresh. Small trees sway, crested wavelets on water.

Relative Call Index Codes	
0-	No individuals heard.
1-	Individuals can be counted. There may be space between calls.
2-	Calls of individuals can be distinguished, but there is some overlapping.
3-	Full chorus of calls. Constant, continuous, and overlapping.

Comments:

* Leopard Frog includes Northern, Plains, and Southern. Please verify and note any confirmed sightings.

** Woodhouse's includes Fowler's toad.

Spacing between measures:											

Spacing b/t measures – divide wetted width by 10.

Backside of data sheet for:
AQUATIC MEASUREMENTS OF LOTIC HABITAT SAMPLING PLOTS.

Channel type (record for each plot): R=Riffle, P=pool, RU=run, G=glide
Wetted width: Width of water.
Bankfull width: The width of the channel from one side to the other, including the crest or almost crest area, beyond which the water would flow out onto the floodplain.
Bankfull height: How deep the water would get before flooding, so measure the height of the lower of the 2 banks.
Incised height: The depth of the incision of the channel. This is the distance to the first terrace. It will be equal to or greater than the bankfull height.
Stream discharge: The volume of water passing a point during a given time (m^3/sec).
Water temperature
Water pH: The amount of acidity in the water.
Conductivity: The amount of ions (e.g. salts) dissolved in the water.
Riparian vegetation width is the width of the vegetation within the floodplain

At 4 locations into the channel from the shore edge, record the water depth at that point and determine the amount of that part of the plot (0.25*0.25m) in each of the following categories:
Bedrock
Boulders (> 300 mm)
Cobble (75-300 mm in size)
Gravel (2-75 mm)
Sand
Silt (mud or clay, organic muck or peat)
Emergent vegetation
Submergent vegetation
Percent coverage in these 8 boxes should add to 100.

If it is possible to cross the channel, water depth should be measured at 10 equally spaced locations.

Date entered:_____by:_____Record#:_____Date checked:_____by:_____

AQUATIC MEASUREMENTS OF LOTIC (running water) HABITAT SAMPLING PLOTS.
DATE:_____OBS:_____LOCATION:_____PG:___of___

POOLS data:

Number	Maximum depth	Surface area	Cause

Number: May be obtained from GIS cover or in the field. Either check with numbered map or mark number and location on map in field for addition to the GIS database.
Cause: Why is the water pooling? Examples include log, rocks, soil, dam.

Additional notes on wildlife encountered today:

Woody debris:

Distance from downstream starting pt.	Small end diameter	Large end diameter	Length	Decay class

Distance can be filled out in the lab based on GIS coverage and used to find sampling plot.
In edge depth=depth at the edge of the plot furthest into the water from shore.
% classifications: Bedrock
Boulders (> 300 mm)
Cobble (75-300 mm in size)
Gravel (2-75 mm)
Sand
Silt (mud or clay, organic muck or peat)
Emergent vegetation
Submergent vegetation
Percent coverage in these 8 boxes should add to 100

Non-scientific Reviewer Name:_____ Date of review return:_____

Peer review of the above named document has been completed. Reviewers comments have been sent to the program scientist(s). Program scientist(s)' responses to the comments have been documented. The final document has been received. Assurance is given that the document and review have met the Periodic Review and Evaluation guidelines outlined in the MSIM manual. A record of the review comments and revision strategy is on file.

Name & Title of Peer Review Coordinator: _____

_____

_____ _____

Signature of Peer Review Coordinator Date

Instructions to Scientific Peer Reviewers
Reviewer Comments Form

To make the review process as easy as possible, the following questions are the primary ones to consider. Should the answer to a question be "no", please provide narrative comments in either the space provided or on additional paper. Address additional issues at the end of this form or on additional paper.

1. Are the objectives clearly defined and reachable?

2. Is the sampling and experimental design appropriate?

    a. Will it meet the program objectives?

    b. Is it statistically valid?

3. Are the field techniques clearly described and sufficient to meet program objectives?

4. Are analytical and statistical procedures clearly described and appropriate?

5. Does the timeline and budget ensure that objectives will be met?

6. Are reports and other products identified and adequate?

7. Is the combination of scientific disciplines proposed sufficient to adequately meet the objectives?

8. Additional issues:

*Reviewer Name & Title:_____

_____ _____

Signature or Reviewer Date

*If you wish to remain anonymous to the program staff, please make sure that the review coordinator understands this and do not sign this paper.

Instructions to Non-scientific Peer Reviewers
Reviewer Comments Form

To make the review process as easy as possible, the following questions are the primary ones to consider. Should the answer to a question be "no", please provide narrative comments in either the space provided or on additional paper. Address additional issues at the end of this form or on additional paper.

1. Is the report understandable and easy to read?

2. Does the report adequately describe the objectives, sites, how the data was collected and analyzed?

3. Are the conclusions logical?

4. Additional issues:

*Reviewer Name & Title:_____

_____ _____

Signature or Reviewer Date

*If you wish to remain anonymous to the program staff, please make sure that the review coordinator understands this and do not sign this paper.
